ProjectForge AI UML Sequence Diagram

Figure 2.4(a) Project creation and requirement clarification

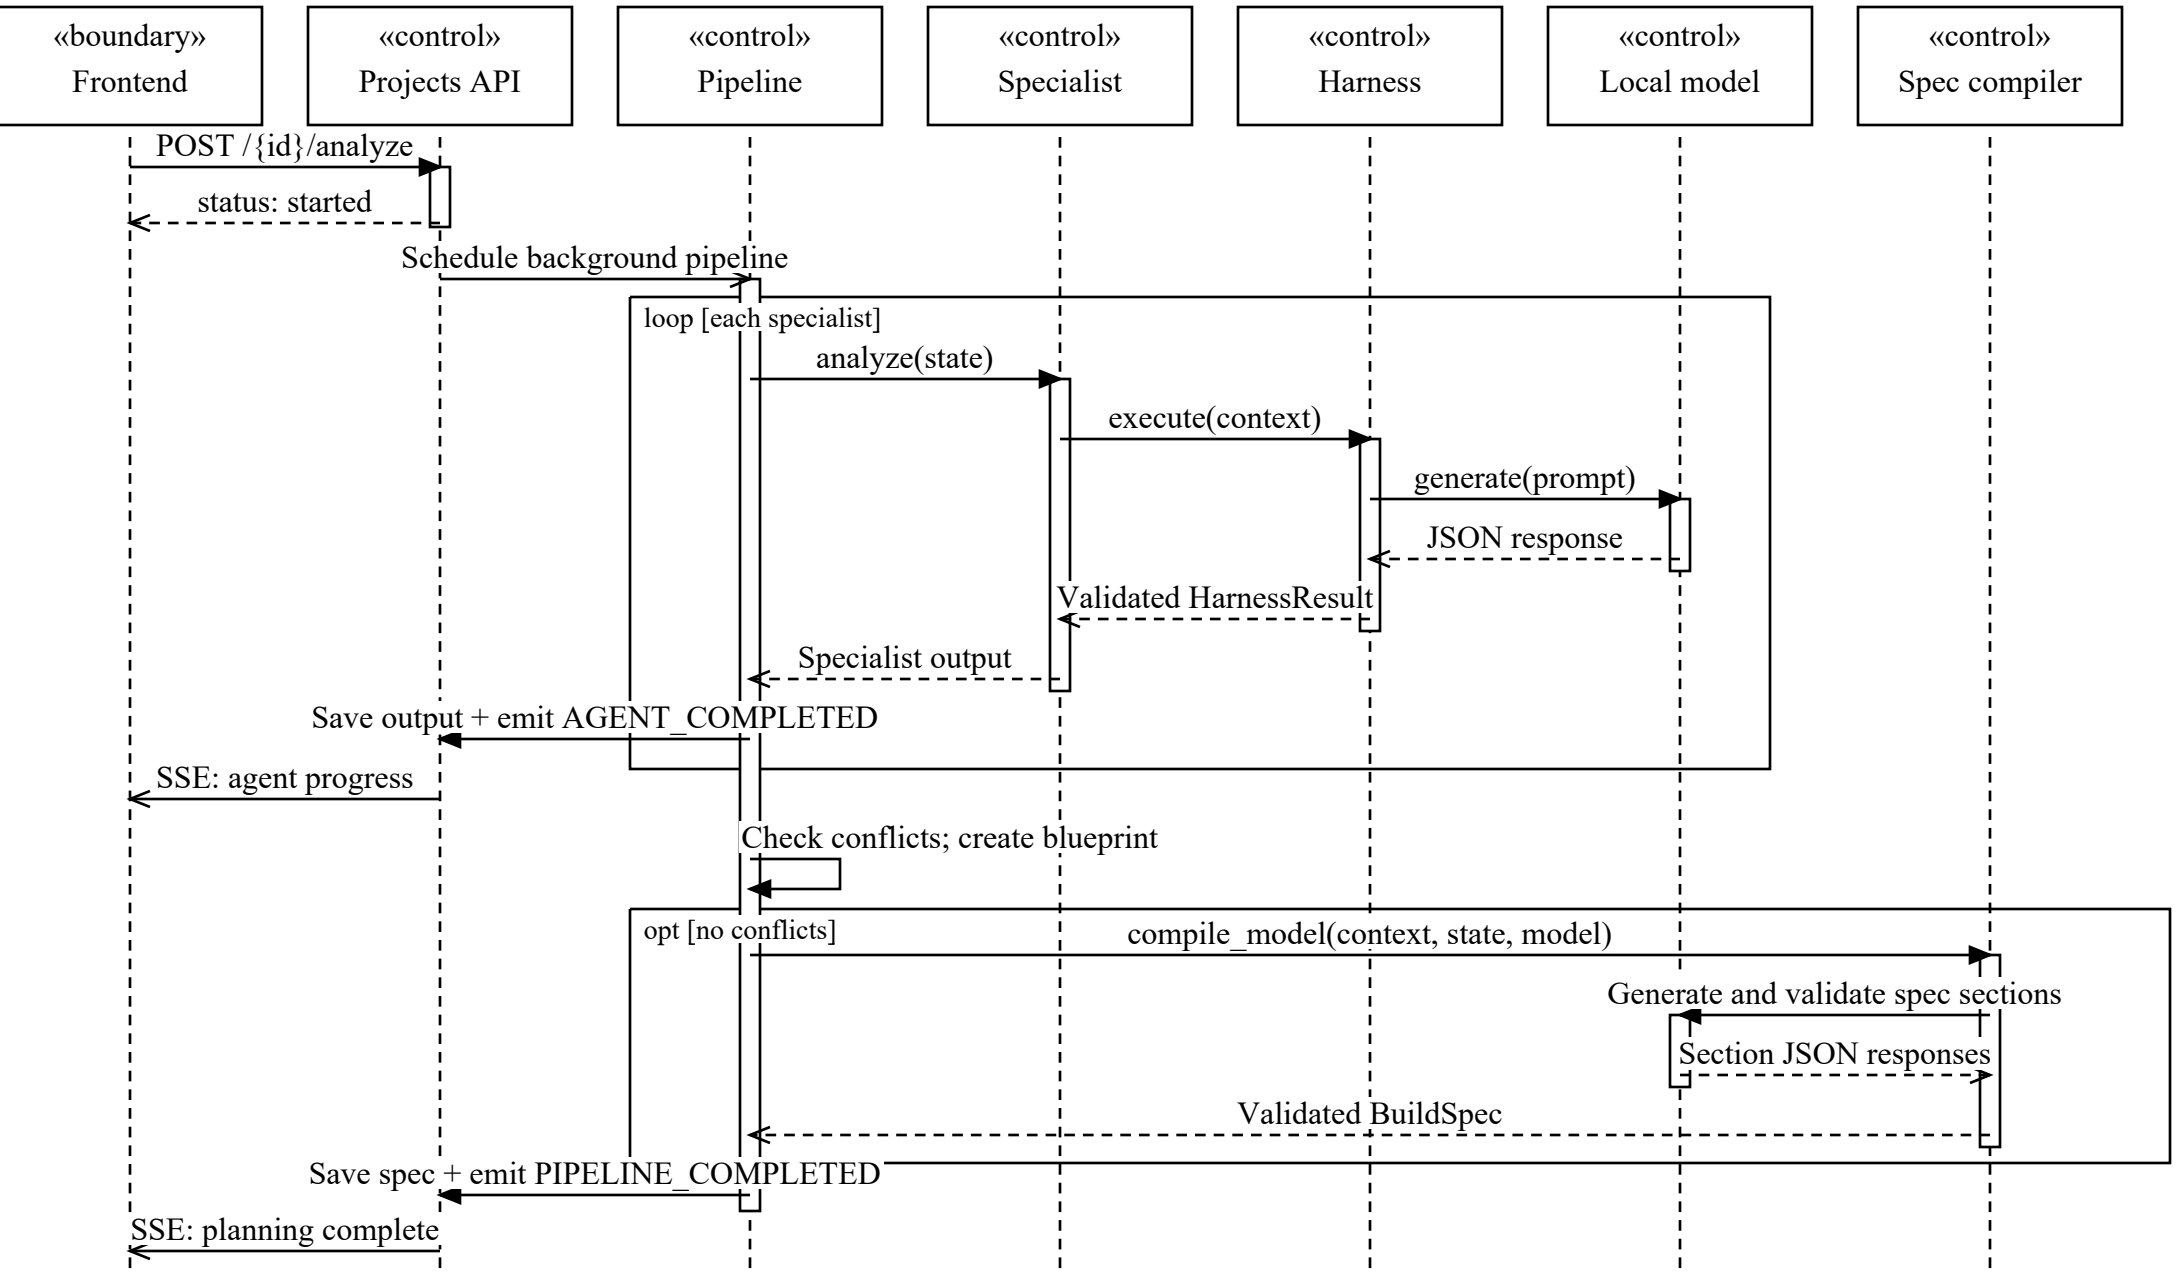

Understanding denotes execute_understanding(); failed model extraction returns labelled heuristic suggestions.

Filled arrow: call | Open arrow: asynchronous message | Dashed arrow: return | Narrow rectangle: activation

ProjectForge AI UML Sequence Diagram

Figure 2.4(b) Offline specialist analysis and build specification

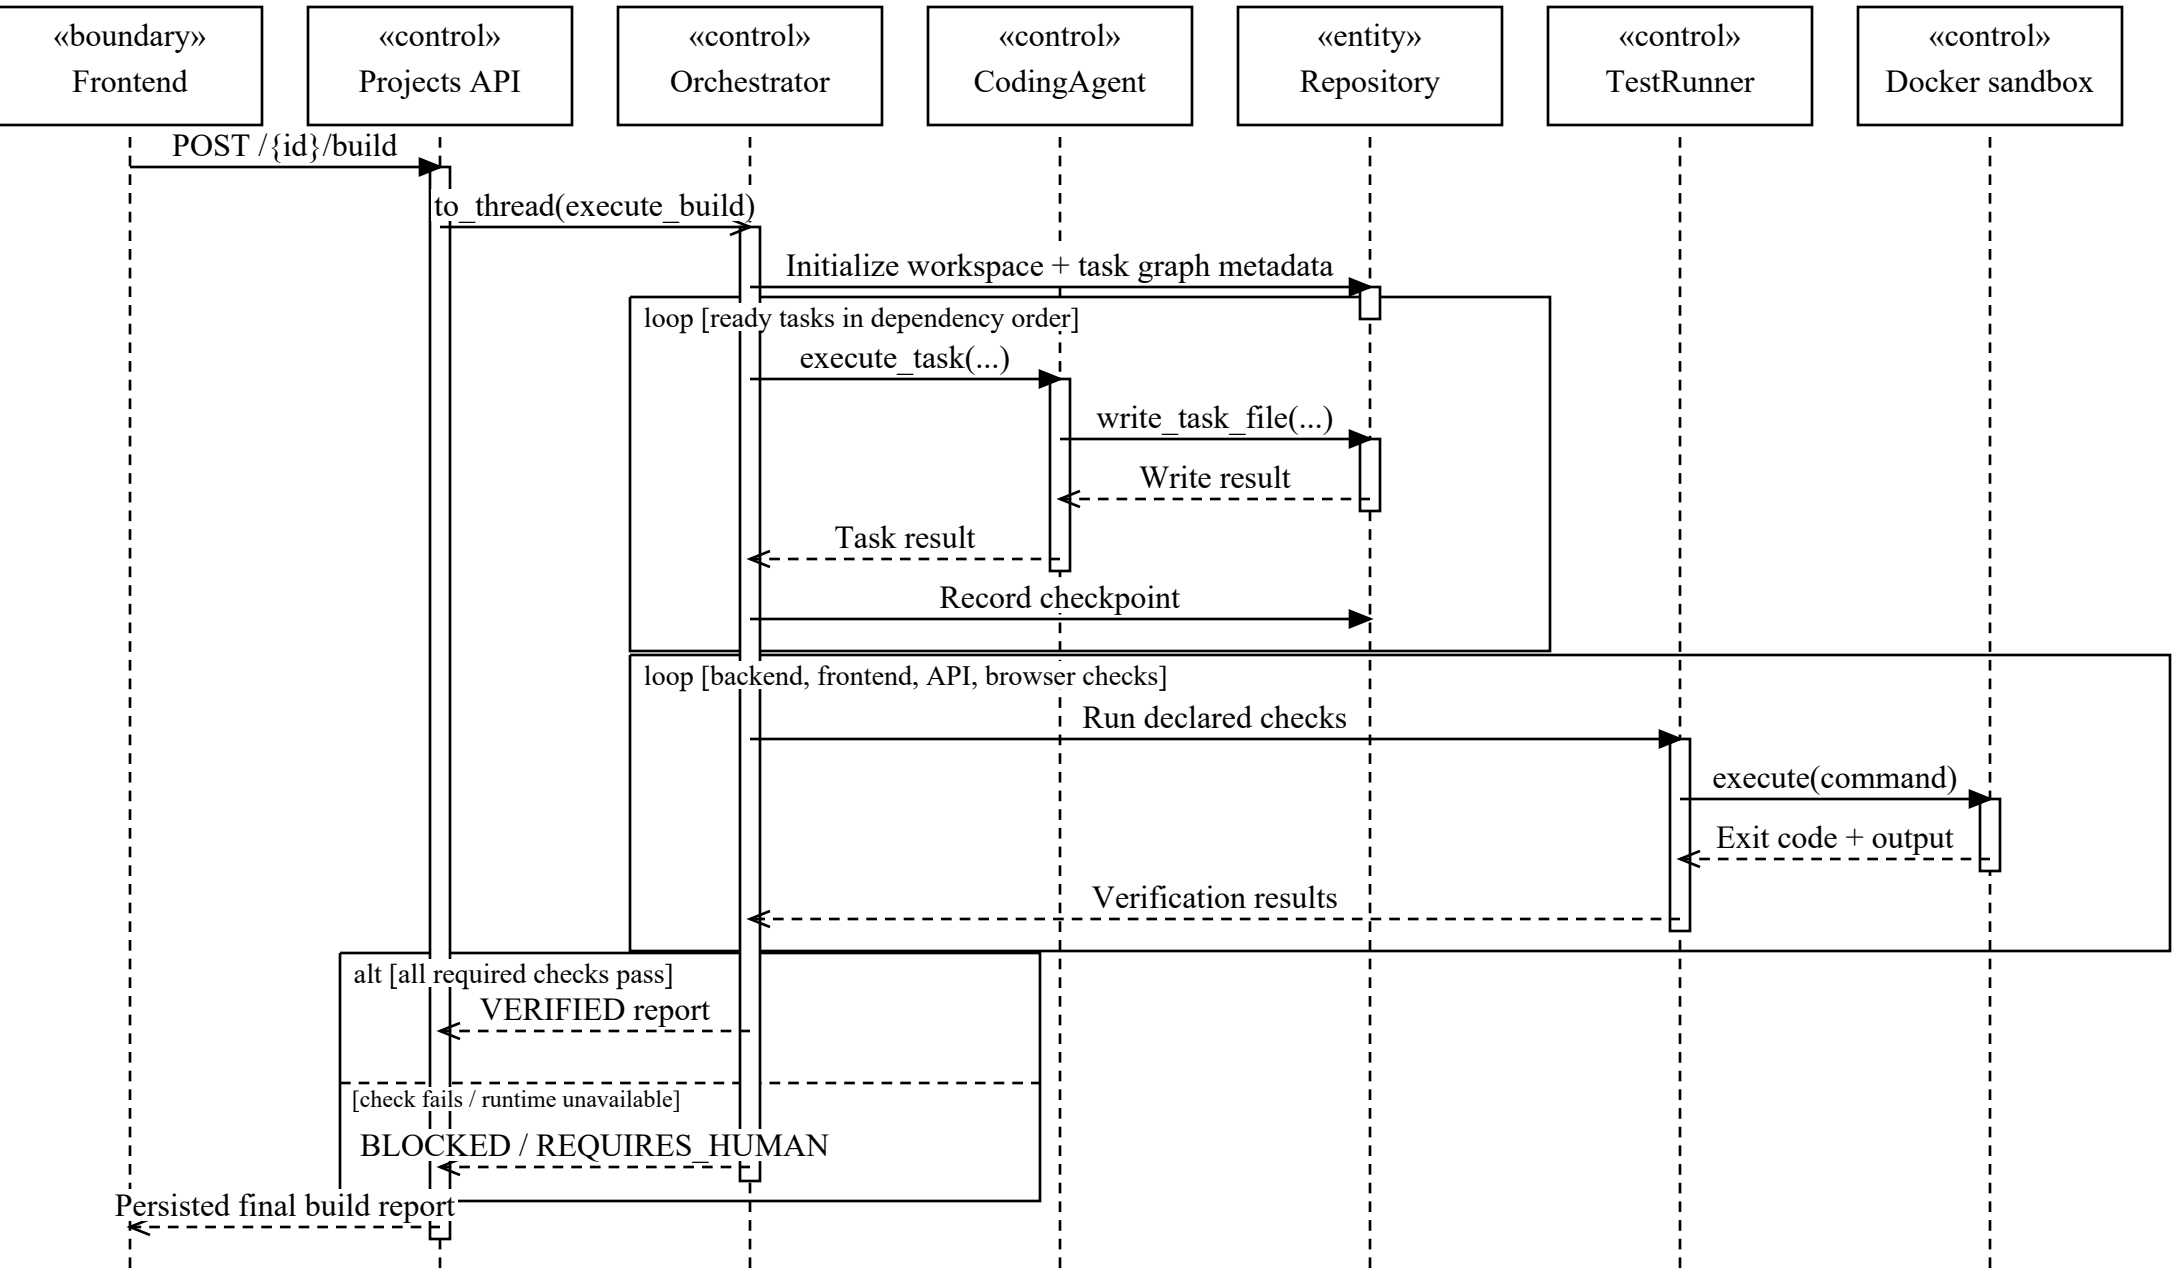

Specialist loop order: Product, AI/ML, Engineering, UX, Security, QA. Contradictions or invalid output stop planning.

Filled arrow: call | Open arrow: asynchronous message | Dashed arrow: return | Narrow rectangle: activation

ProjectForge AI UML Sequence Diagram

Figure 2.4(c) Source generation and isolated verification

Current offline strategy: DECLARATIVE_CRUD. Backend/API/browser/build checks run without container network access.

Filled arrow: call | Open arrow: asynchronous message | Dashed arrow: return | Narrow rectangle: activation
